Freddy Micro+

Leading the way in coolant **Recycling**

The Freddy Micro Plus is the newest addition to the ever-expanding Freddy range, enjoying the benefits of the standard Micro but with now the ability to empty under pressure in just 45 seconds.

Unlike many of our competitors the Micro+ does not use fragile submersible pumps which take up valuable space in the tank and make it incredibly difficult to thoroughly clean out. It gives the machine the ability to take on heavily contaminated liquids without fear of damaging any parts it comes in contact with. The airflow is switched from vacuum to pressurized to force collected liquids out of the holding tank.

- The most widely used and well-established coolant vacuum range in the world
- Recycles coolant and extends coolant life
- Enhances coolant performance and production quality
- Significantly reduces coolant usage
- Improves and extends tool life
- Extensively cuts waste disposal costs
- Removes contaminants that cause bacterial growth

Specifications

- 50-liter tank capacity
- Finished in oil and acid resistant powder coated paint
- 37-liter perforated steel filter basket
- Comes with 38mm hose and gulper tool (option of 51mm)
- Filters available from 1-1000um

Micro+ Models

Capacity: 50ltr | Length: 810mm | Width: 470mm | Height: 1110mm

Power unit	No. of phases	Weight (empty)	Weight (full)	Airflow	Water flow in	Water flow out
------------	---------------	----------------	---------------	---------	---------------	----------------

2k240v	1	68	121	3000	238	70
2k110v	1	68	121	3000	238	70
